

Business Broadband

Business broadband services tailored for every business.

In today's fast-paced digital world, reliable internet connectivity is crucial for the success of your business. Our high-speed business broadband services are designed to keep you ahead of the competition, ensuring seamless operations and enhanced productivity.

Why choose our business broadband?

We offer fast download and upload speeds that support all your business activities, from video conferencing and VoIP calls to cloud computing and large file transfers.

Enjoy a stable and dependable internet connection with our robust infrastructure and proactive monitoring, minimising downtime and keeping your business running smoothly.

Our flexible broadband plans allow you to easily upgrade your bandwidth to meet increasing demands.

Our expert support team is available to assist you with any issues or queries, ensuring you receive prompt and efficient service whenever you need it.

Which service is right for my business?

Single order Generic Ethernet Access (SoGEA)

SoGEA is a new solution that enables us to provide broadband without needing a telephone line. It gives you the Internet connection you require, within a single order and without needing a telephone line.

SoGEA is fast to install and more reliable than legacy broadband solutions. SoGEA has a maximum download speed of 80Mbps.

For more information about our tailored business broadband services call ASL on **0345 862 0350**.

Business Broadband Services

Leased Lines

A leased line is an alternative to the standard public broadband, it is a dedicated service whereby your business connects directly to the exchange and the line is exclusively for your business.

A leased line could be the best option for your business if your current internet connection:

- Provides patchy performance or does not perform as you expect or need.
- If your current provider experiences glitches and or go-slows.
- If the quality of your internet service ever gets in the way of getting tasks done quickly, efficiently and on time.

Key benefits of choosing a leased line service:

- ✓ Dedicated Bandwidth
- ✓ Symmetrical Speeds
- ✓ High Reliability
- ✓ Scalability
- ✓ Enhanced Security

Fibre-to-the-Premises (FTTP)

FTTP delivers high-speed internet connectivity directly to your office or home, is fast to install and gives you guaranteed speed and performance. It's also reliable.

FTTP makes it easy to overlay IP services like VoIP (Voice over Internet Protocol) and provides a stable future-proof platform to run your voice services.

Depending upon geographic location and chosen package, maximum download speeds are up to 1000Mbps.

Ubiquiti Managed Wi-Fi Service

Managed Wi-Fi services offer security and great performance with outstanding coverage and reliability. Ubiquiti works to boost and expand Wi-Fi coverage in your office or home.

How much does this service cost?
